1. General Description and Features

GTTQ57SN761E0 is a transmissive type color active matrix TFT (Thin Film Transistor) liquid crystal display (LCD) that uses amorphous silicon TFT as a switching device. This model is composed of a TFT-LCD module, a driver circuit and a back-light unit. Graphics and texts can be displayed on a QVGA 320 (W) \times 3 \times 240 (H) dots with 262,144 colors by supplying 18 bits data signal (6bits/each color). The following table described the features of GTTQ57SN761E0.

1.1 Features

- Transmissive and back-light with 18 LEDs are available.
- TN (Twisted Nematic) mode.
- Digital RGB (6bits/color) data transfer.

1.2 LCD Module

Item	Specification	Unit
Screen Size	Screen Size 5.7 inches	
Display Resolution	320 (H) x 240 (V)	Pixel
Active Area	115.20 (H) x 86.40 (V)	mm
Outline Dimension	144.00 (H) x 104.60 (V) x 12.80 (T)	mm
Display Mode	Normally white mode/ Transmissive/ Wide view	
Pixel Arrangement	R,G,B Vertical Tripe	
Pixel size	120 x 360	um
Display Color	Full Colors	
Viewing Direction	6 o'clock	
Input Interface	Digital RGB (6bits/color) Data Transfer	
TFT Driver	Source: HX8218A, Gate: HX8615A	

2. Mechanical Information

Item		Min.	Тур.	Max.	Unit	Note
	Horizontal (H)		144.00		mm	(1,2,3)
Module Size	Vertical (V)		104.60		mm	(2)
	Thickness (T)		12.80		mm	(1,3)
Weight			N/A		g	

Note (1) Not include FPC. Refer to the Outline Dimension Drawing as attached.

- (2) Back-light unit is included.
- (3) Excluding backlight cables.

Electrical Specifications

- 3.1 Absolute Max. Ratings
 - Absolute Ratings of Environment

If the operating condition exceeds the following absolute maximum ratings, the TFT LCD module may be damaged permanently.

Item	Symbol	Min.	Max.	Unit	Note
Storage temperature	T_{STG}	-20	70	°C	(1)
Operating temperature	T_{OPR}	-10	60	°C	(1,2,3)

Note (1) 95 % RH Max. (40 °C ≥ Ta). Maximum wet-bulb temperature at 39 °C or less. (Ta > 40 °C) No condensation.

- Note (2) In case of below 0°, the response time of liquid crystal (LC) becomes slower and the color of panel becomes darker than normal one. Level of retardation depends on temperature, because of LC's character
- Note (3) Only operation is guarantied at operating temperature. Contrast, response time, another display quality are evaluated at +25°C.

a. Test equipment setup

After stabilizing and leaving the panel alone shall be warmed up for the stable operation of LCM, the measurement should be executed. Measurement should be executed in a stable, windless, and dark room. Optical specifications are measured by Topcon BM-7A(fast) with a viewing angle of 2° at a distance of 50cm and normal direction.

b. Definition of response time: Tr and Tf

The response time is defined as the following figure and shall be measured by switching the input signal for "black" and "white".

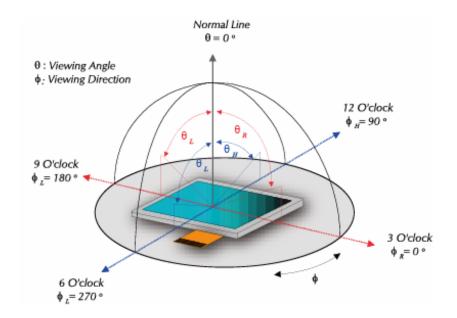

c. Definition of contrast ratio:

d. Measured at the center area of the panel when all the input terminals of LCD panel are electrically opened.

JANProduct Specification Rev. No. Issued Date. Page. A May. 09, 08 14 / 28

e. View Angle

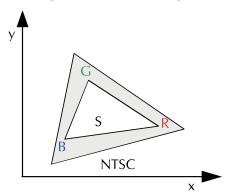

f. Definition of Luminance of White: Luminance of white at the center points

Light Source of Back-Light Unit	LED Type
---------------------------------	----------

g. Definition of White Uniformity

h. The definition of Color Gamut -Color Chromaticity CIE 1931
 Color coordinate of white & red, green, blue at center point.
 Color Gamut : NTSC(%) = (RGB Triangle Area / NTSC Triangle Area) x 100

6. Test

No change on display and in operation under the following test condition.

Condition: Unless otherwise specified, tests will be conducted under the following condition.

Temperature: 20±5°C. Humidity: 65±5%RH.

Tests will be not conducted under functioning state.

	rests will be not conducted under functioning state.				
No.	Parameter	Condition	Notes		
1	High Temperature Operating	60°C±2°C, 120hrs (Operation state).			
2	Low Temperature Operating	-10°C±2°C, 120hrs (Operation state).	1		
3	High Temperature Storage	70°C±2°C, 120hrs.	2		
4	Low Temperature Storage	-20°C±2°C, 120hrs.	1,2		
5	Damp Proof Test	40°C±2°C, 90~95%, 120hrs.	1,2		
6	Vibration Test	Total fixed amplitude: 1.5mm. Vibration Frequency: 10~55Hz. One cycle 60 seconds to 3 direction of X, Y, Z each 15 minutes.	3		
7.	Shock Test	To be measured after dropping from 60cm high on the concrete surface in packing state. Dropping method corner dropping: A corner: Once edge dropping.			

Notes:

- 1. No dew condensation to be observed.
- 2. The function test shall be conducted after 4 hours storage at the normal temperature and humidity after removed from the test chamber.
- 3. Vibration test will be conducted to the product itself without putting I in a container.

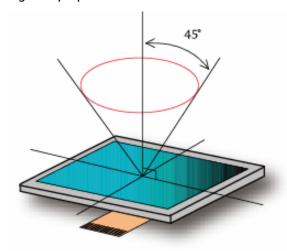

JANProduct Specification Rev. No. Issued Date. Page. A May. 09, 08 20 / 28

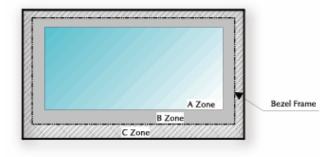

7. Appearance

7.1 Inspection

The distance between the eyes and the sample shall be more than 30cm. All directions for inspecting the sample should be within 45° against perpendicular line.

Definition of Applicable Zones

A Zone: Active display area, B Zone: Area from outside of "A Zone" to validity viewing area

C Zone : Rest parts, A Zone + B Zone = Validity viewing area

(a) Operating Inspection

The function and appearance shall be inspected in the condition of

- under 750 lx or over light Reflective Type.
- Using over Backlight unit Transflective Type, Transmissive Type

Condition of judgment

In case of no gradation display it judges by applied On/Off voltage or optimal contrast.

In case of gradation display it judges by contrast that the bad point is able to confirm best.

(b) Appearance Inspection

The appearance shall be inspected in the condition of

- under 500 lx or over light Reflective Type.
- Using over Backlight unit Transflective Type, Transmissive Type

(c) Inspection Environment

Inspection environment it carried out with 250 lx or less in principles.

7.3 Visual inspection

Should be checked at 22±2°C, 50±5%RH, 300-500 lux, 300mm distance, within 80 degree viewing angle in 4 directions, at typical LED current.

7.3.1 Outside of effective lighting area

Item	Condition	Specification
Particle	Non-Operation	Cannot be shown easily.
Non-lighting, Unstable lighting	Operation	None
Contamination and defects of mold frame	Non-Operation	None

7.3.2 Inside of effective lighting area

Item	Condition	Specification
Black spot, Particle	Operation	D < 0.10 : OK (not within 15mm) $0.10 \le D < 0.20$: 2EA OK (not within 15mm) $D \ge 0.20$: NG $D = (a+b)/2$
Bright spot, Bright Line, Dim spot Scratch, Newton Ring	Operation	Should not be shown on the glass panel after panel ass'y
Stain	Operation	Should not be shown on the glass panel after panel ass'y

JANProduct Specification Rev. No. Issued Date. Page. A May. 09, 08 24 / 28

8. Precautions

8.1 Operation

Burn-in sometimes happens when the same character was displayed at along time. Therefore, to prevent Burn-in, it is recommended to set up a Screen-saver function.

8.2 Safety

The liquid crystal in the LCD is poisonous, DO NOT put it in your mouth. If the liquid crystal touches your skin or clothes, wash it off immediately using soap and water.

8.3 Handling

a. The LCD module shall be installed flat, without twisting or bending.b. COF or FPC has narrow pattern width, so easily become open circuit by external force. DO NOT apply pressure to COF or FPC especially in bending area.
c. To avoid damage in appearance or malfunction, DO NOT subject the module to mechanical shock or to excessive force on its surface.
d. The polarizer attached to the display is very easy to damage, handle it with care to avoid scratching.
e. To avoid contamination on the display surface, DO NOT touch the display surface with bare hands. f. Provide a space so that the LCD module does not come into contact with other components.
g. To protect the LCD panel from external pressure, put covering glass (acrylic board or similar board) to keep appropriate space between them.

	h. Be careful for condensation at sudden temperature change. Condensation makes damage to polarizer or electrical contacted parts. And after fading condensation, smear or spot will occur.
	i. Property of semiconductor devices may be affected when they are exposed to light possibly resulting in malfunctioning of the ICs. To prevent such malfunctioning of the ICs, your design and mounting layout done are so that the IC is not exposed to light in actual use.
St. St.	j. Strong light exposure causes degradation of color filter. It may not recover
222	 k. DO NOT contact with water to avoid Metal corrosion. l. When it is not in use, the screen must be turned off or the pattern must be frequently changed by a screen saver. If it displays the same pattern for a long period of time, brightness down/image sticking may develop due to the LCD structure.
(e) (600)	m. Never disassemble LCD product under any circumstances. If unqualified operators or users assemble the product after disassembling it, it may not function or its operation may be seriously affected.

Static electricity

discharge.

8.4

Model: GTTQ57SN761E0

Since a module is composed of electronic circuits, it is not strong to electrostatic

a. The LCD module shall be installed flat, without twisting or bending. Ground soldering iron tips, tools and testers when they operate.

26 / 28

May. 09, 08

- b. Ground your body when handling the products.
- c. DO NOT apply voltage to the input terminal without applying power supply.
- d. DO NOT apply voltage that exceeds the absolute maximum rating.
- e. Store the products in an anti-electrostatic container.
- f. Peel off protect tape, attached to polarizer, slowly to minimize ESD damage.

8.5 Storage

Store the products in a dark place at $+5 \sim +25$ degree C, low humidity (50%RH or less).

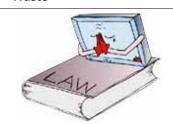

DO NOT store the products in an atmosphere containing organic solvents or corrosive gases.

8.6 Cleaning

- a. DO NOT wipe the polarizer with dry cloth, as it might cause scratch.
- b. Wipe the polarizer with a soft cloth soaked with petroleum IPA, other chemical might damage.

8.7 Waste

When dispose of LCD module, manage it at the production waste according to the relevant laws and regulations.

9. Warranty

This product has been manufactured to your company's specifications as a part for use in your company's general electronic products. It is guaranteed to perform according to delivery specifications. For any other use apart from general electronic equipment, we cannot take responsibility if the product is used in medical devices, nuclear power control equipment, aerospace equipment, fire and security systems, or any other applications in which there is a direct risk to human life and where extremely high levels of reliability are required. If the product is to be used in any of the above applications, we will need to enter into a separate product liability agreement.

- We cannot accept responsibility for any defect, which may arise from additional manufacturing of the 1 product (including disassembly and reassembly), after product delivery.
- 2 We cannot accept responsibility for any defect, which may arise after the application of strong external force to the product.
- 3 We cannot accept responsibility for any defect, which may arise due to the application of static electricity after the product has passed your company's acceptance inspection procedures.
- We cannot accept responsibility for industrial property, which may arise through the use of your product, with exception to those issues relating directly to the structure or method of manufacturing of our product. SGD-origin longer than one year from SGD production.
