a. Test equipment setup

After stabilizing and leaving the panel alone shall be warmed up for the stable operation of LCM, the measurement should be executed. Measurement should be executed in a stable, windless, and dark room. Optical specifications are measured by Topcon BM-7(fast) with a viewing angle of 2° at a distance of 50cm and normal direction.

b. Definition of response time: Tr and Tf

The response time is defined as the following figure and shall be measured by switching the input signal for "black" and "white".

c. Definition of contrast ratio:

Brightness measured when LCD is at "white state"

Contrast Ratio (CR) =

Brightness measured when LCD is at "black state"

d. Measured at the center area of the panel when all the input terminals of LCD panel are electrically opened.

### 8 PRECAUTIONS

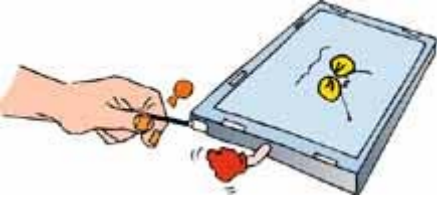

#### 8.1 Operation

Burn-in sometimes happens when the same character was displayed at along time. Therefore, to prevent Burn-in, it is recommended to set up a Screen-saver function.

#### 8.2 Safety

The liquid crystal in the LCD is poisonous, DO NOT put it in your mouth. If the liquid crystal touches your skin or clothes, wash it off immediately using soap and water.

#### 8.3 Handling

	<p>a. The LCD module shall be installed flat, without twisting or bending.</p> <p>b. COF or FPC has narrow pattern width, so easily become open circuit by external force. DO NOT apply pressure to COF or FPC especially in bending area.</p>
	<p>c. To avoid damage in appearance or malfunction, DO NOT subject the module to mechanical shock or to excessive force on its surface.</p>
	<p>d. The polarizer attached to the display is very easy to damage, handle it with care to avoid scratching.</p>
	<p>e. To avoid contamination on the display surface, DO NOT touch the display surface with bare hands.</p> <p>f. Provide a space so that the LCD module does not come into contact with other components.</p>
	<p>g. To protect the LCD panel from external pressure, put covering glass (acrylic board or similar board) to keep appropriate space between them.</p>

	<p>h. Be careful for condensation at sudden temperature change. Condensation makes damage to polarizer or electrical contacted parts. And after fading condensation, smear or spot will occur.</p>
	<p>i. Property of semiconductor devices may be affected when they are exposed to light possibly resulting in malfunctioning of the ICs. To prevent such malfunctioning of the ICs, your design and mounting layout done are so that the IC is not exposed to light in actual use.</p>
	<p>j. Strong light exposure causes degradation of color filter. It may not recover</p>
	<p>k. DO NOT contact with water to avoid Metal corrosion.                  l. When it is not in use, the screen must be turned off or the pattern must be frequently changed by a screen saver. If it displays the same pattern for a long period of time, brightness down/image sticking may develop due to the LCD structure.</p>
	<p>m. Never disassemble LCD product under any circumstances. If unqualified operators or users assemble the product after disassembling it, it may not function or its operation may be seriously affected.</p>

### 8.4 Static electricity

Since a module is composed of electronic circuits, it is not strong to electrostatic discharge.

	<ol style="list-style-type: none"> <li>a. The LCD module shall be installed flat, without twisting or bending. Ground soldering iron tips, tools and testers when they operate.</li> <li>b. Ground your body when handling the products.</li> <li>c. DO NOT apply voltage to the input terminal without applying power supply.</li> <li>d. DO NOT apply voltage that exceeds the absolute maximum rating.</li> <li>e. Store the products in an anti-electrostatic container.</li> <li>f. Peel off protect tape, attached to polarizer, slowly to minimize ESD damage.</li> </ol>
---	--

### 8.5 Storage

	<p>Store the products in a dark place at +5 ~ +25 degree C, low humidity (50%RH or less).</p> <p>DO NOT store the products in an atmosphere containing organic solvents or corrosive gases.</p>
---	---

### 8.6 Cleaning

	<ol style="list-style-type: none"> <li>a. DO NOT wipe the polarizer with dry cloth, as it might cause scratch.</li> <li>b. Wipe the polarizer with a soft cloth soaked with petroleum IPA, other chemical might damage.</li> </ol>
